Research and Technical Experience

- **University of Waterloo**
  PhD Research Assistant — *Sept. 2020 - Present*
  - **RAN and Core Slicing**: Addressed the gaps in SOTA literature on 5G slice modeling, 5G slice admission control (SAC), and resource allocation. Developed a novel slice modeling approach, and proposed an online SAC framework with a theoretical performance guarantee for practical applicability. Proposed an RL-based framework for dynamic resource scaling of 5G slices. Validated the different solutions on an in-lab 5G testbed.

- **Information Processing and Transmission Lab, NUST**
  Ungraduate Research Assistant *Jun. 2018 - Aug. 2018*
  - **Activity recognition using Channel State Information:**: Developed expertise in Universal Software Radio Peripherals (USPRs) using GNU Radio. Researched Channel State Information (CSI) for activity recognition. Successfully developed a CSI-based Live Activity Recognition Framework using commodity hardware.
